

A private home for 263 alumni, built to work on any phone

APSU '16

Alumni platform with a private member portal, event payments and moderated community content

Swipe →

What needed solving

- 01** More than 250 members needed a private place to find each other, but the member list had to stay hidden from the public.
- 02** Events needed RSVPs where members choose options and pay straight away through the association's existing payment drive.
- 03** Executives needed to review honours nominations and member updates without asking a developer.
- 04** Most members use phones on slow mobile connections, so every page had to be light and fast.

Built end to end

01 Private member portal

02 Event RSVPs with options

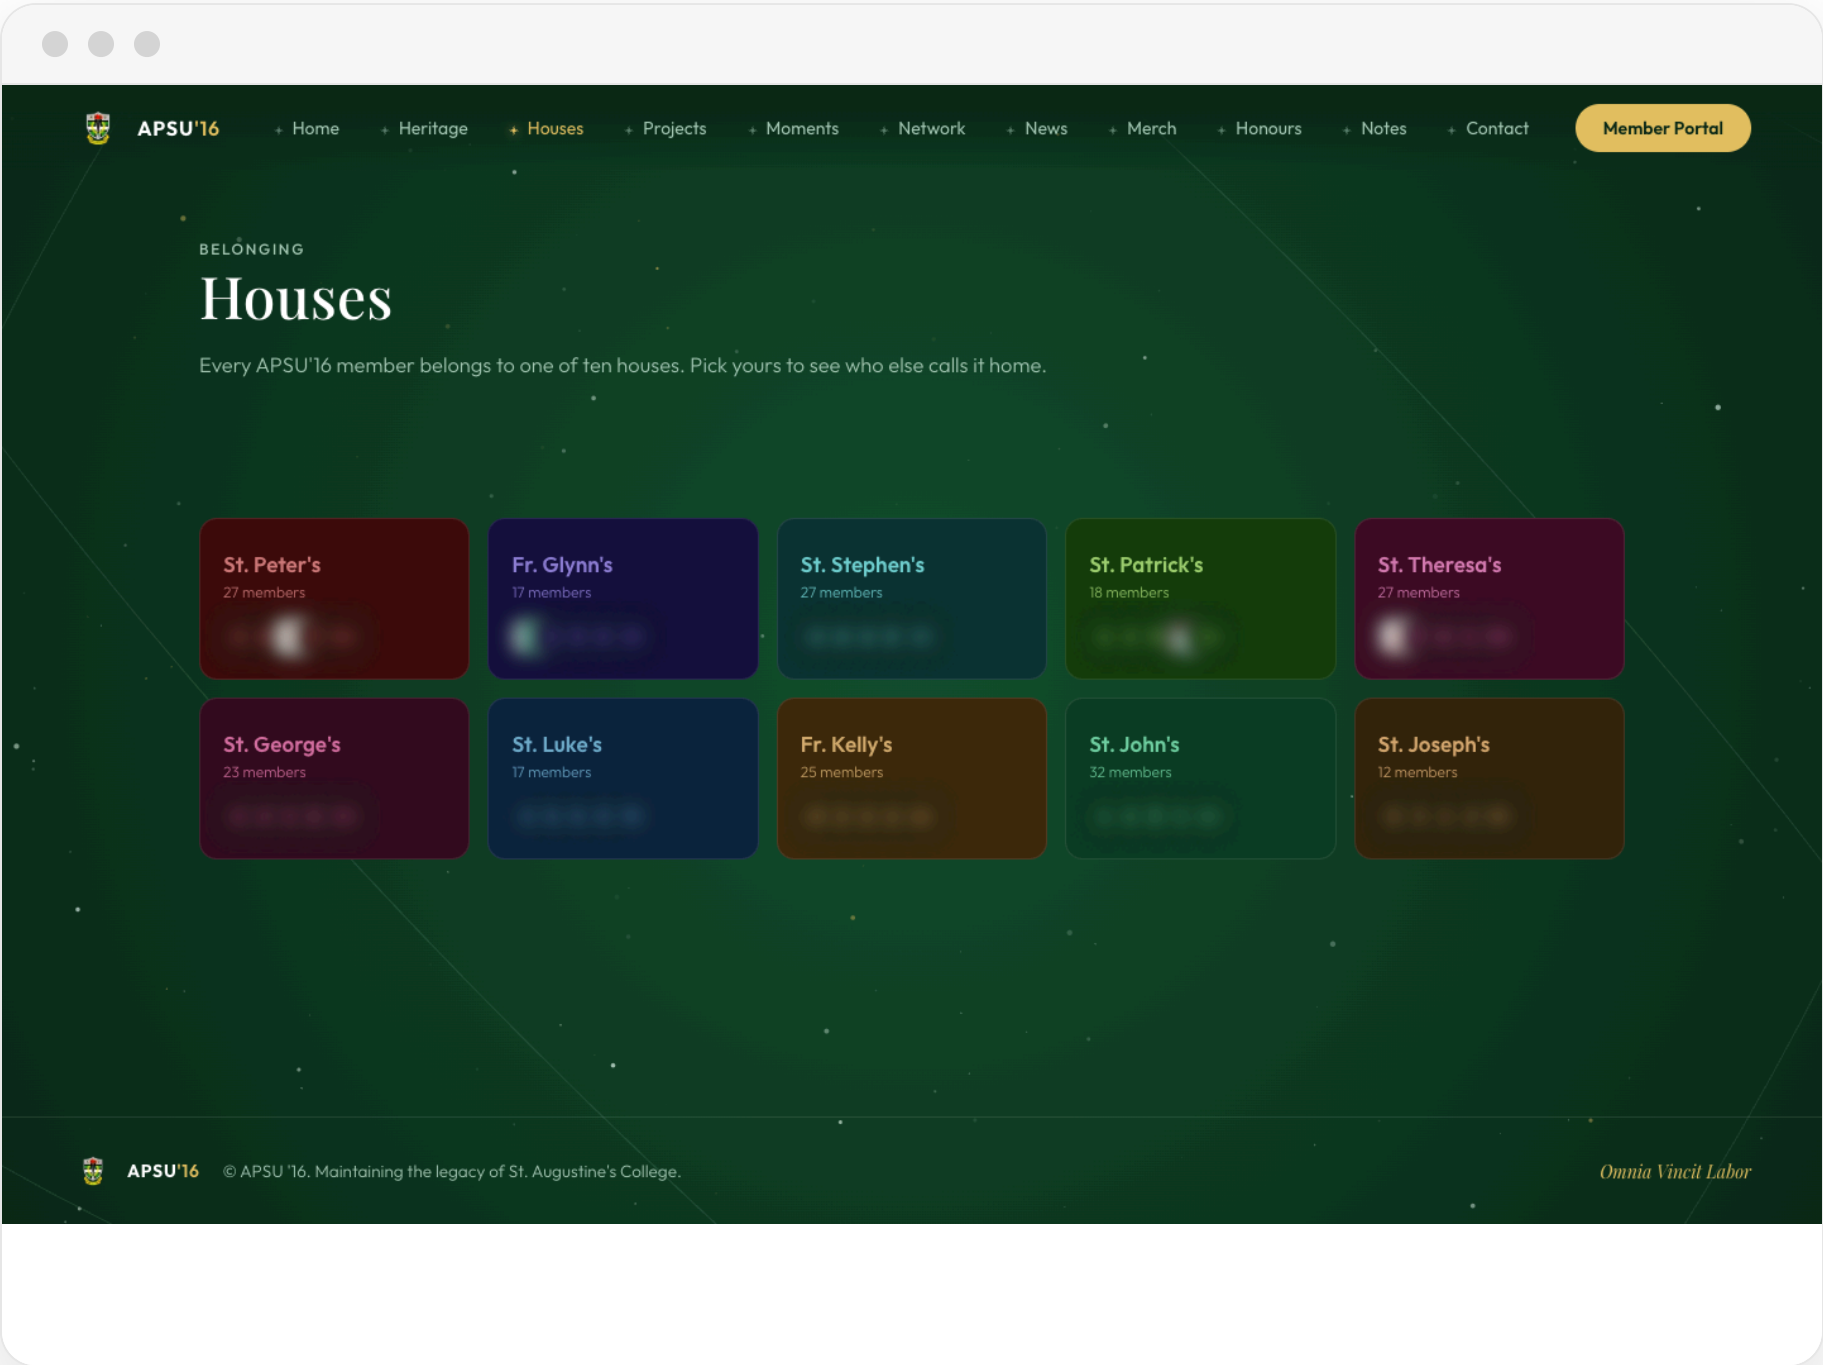

03 Honours and class notes

04 Self-service content

05 Opening animation

06 Ten houses

— INSIDE THE PRODUCT

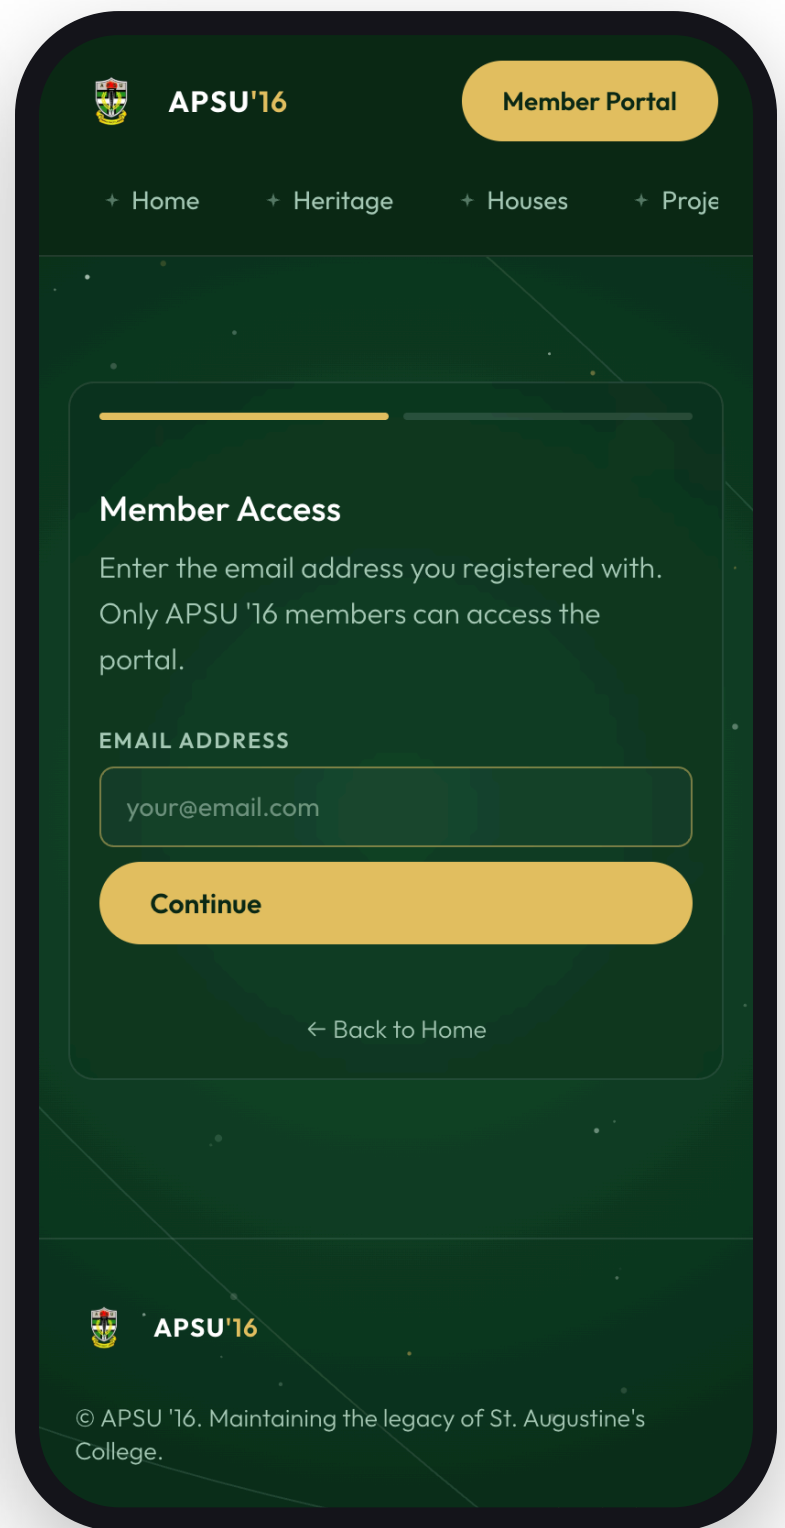

Houses: every member belongs to one of ten (member photos blurred)

— MORE OF THE PRODUCT

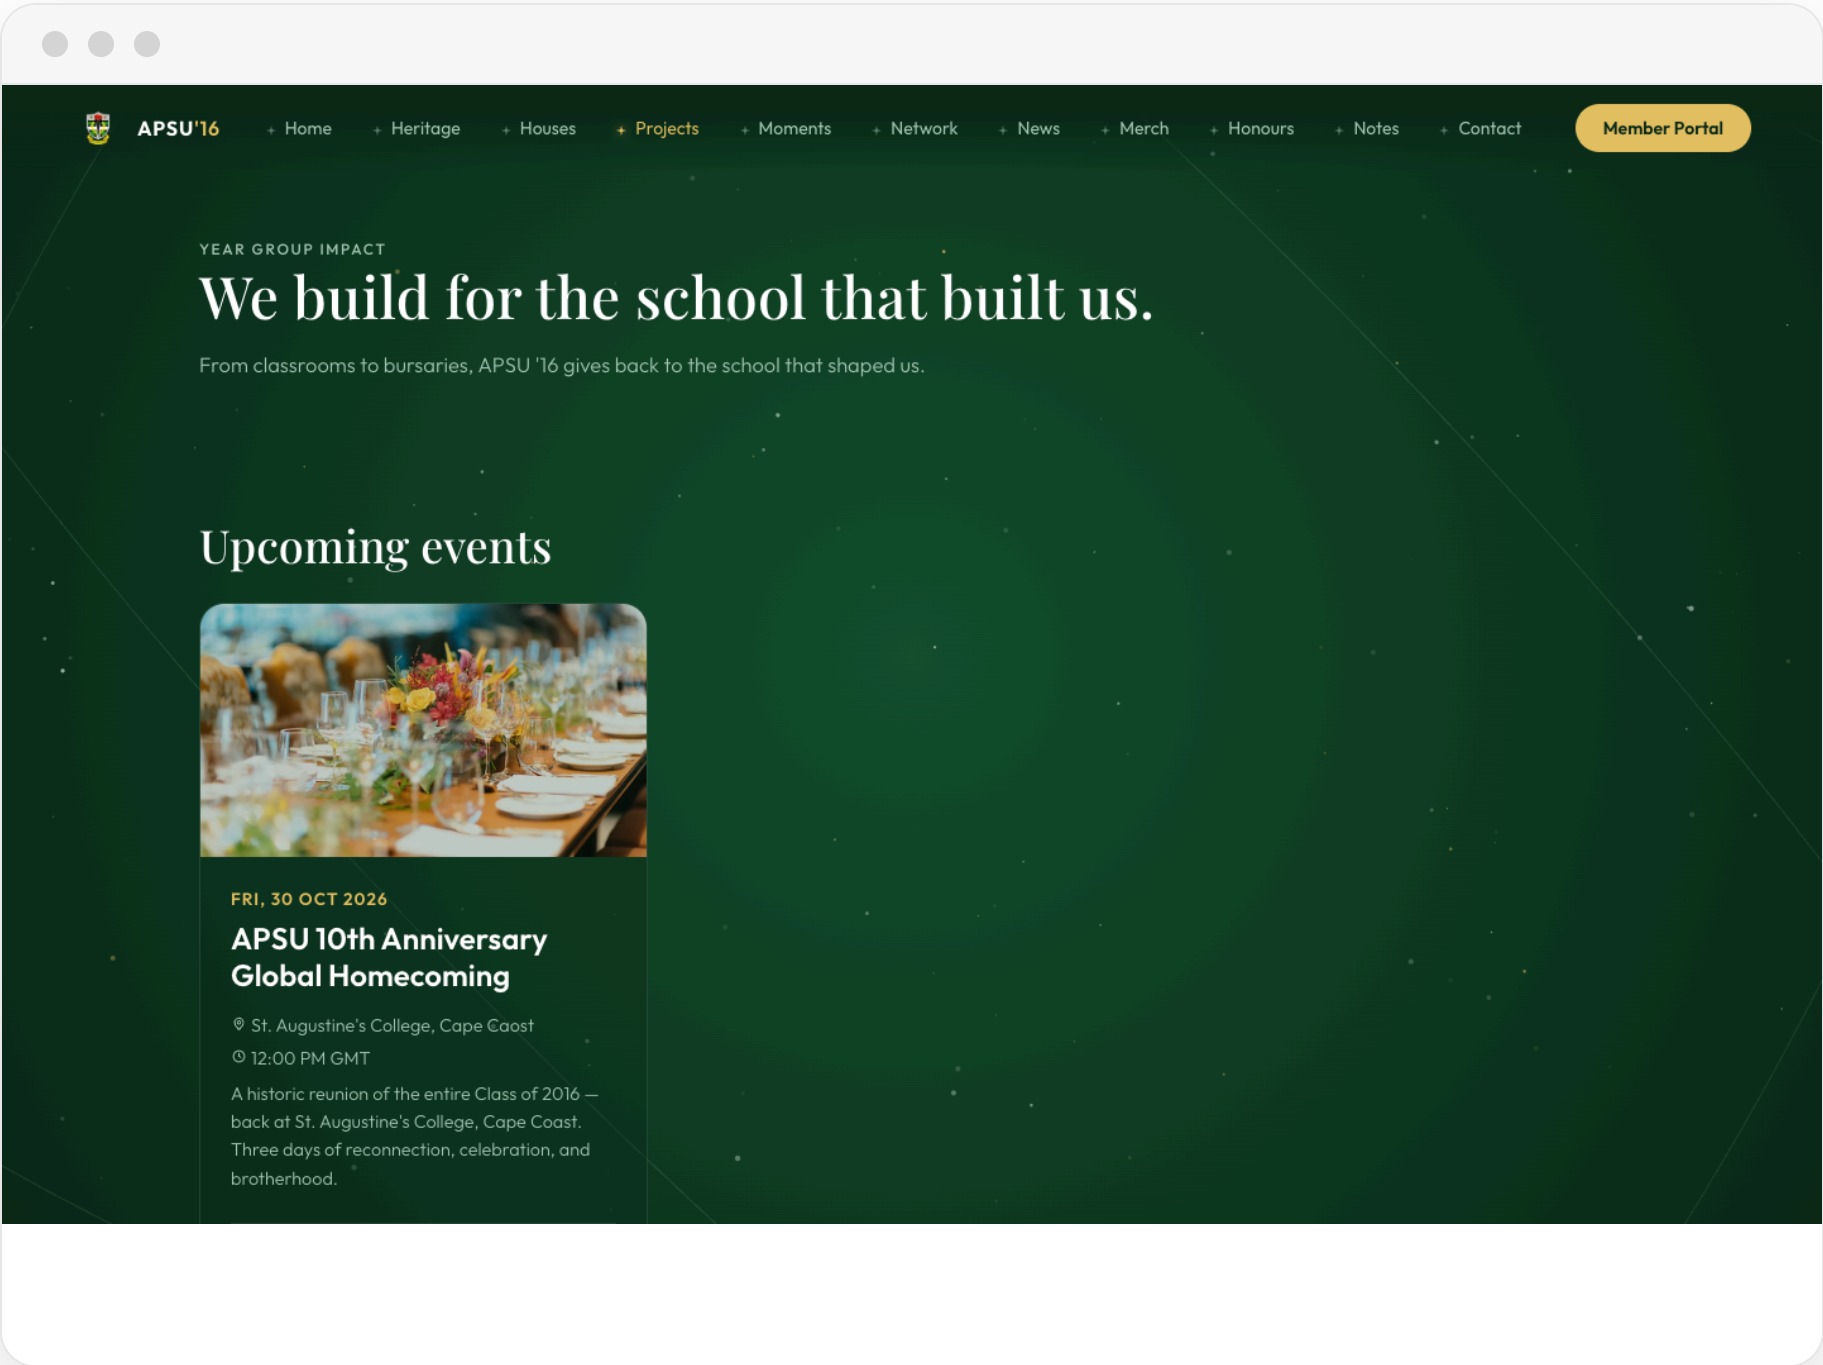

Opening animation: particles form the wordmark

Member sign-in with a one-time code

Projects and upcoming events

Built to be trusted

- 01** Row-level security on member data. Sensitive database functions run on the server only.
- 02** Payment amounts calculated on the server. The browser only sends which package was chosen.
- 03** Membership lookups moved into a rate-limited server route, to stop scripted email checks.
- 04** Uploads checked by file contents, not file name. Spreadsheet exports guarded against formula injection.
- 05** Security headers (CSP, HSTS, no framing) and error monitoring with Sentry.

The outcome

Live

at apsu16.com

263

verified members

22%

less JavaScript per public page (352 kB down to at most 275 kB)

10

house pages, one for each school house

Next.js 15

React 19

TypeScript

Supabase (Postgres, Auth, Storage, Realtime)

GSAP

HTML Canvas

GroupFund (mobile money)

Sentry

Vercel
