

A trading desk where no strategy goes live until it passes the test

Trading Desk

Rule-based trading signals, live position tracking and AI review for gold, GBP/USD and Bitcoin

Swipe →

What needed solving

- 01** Trades are placed by hand, so every alert has to say exactly what to do and when, or the trade is missed.
- 02** Signals arrived late: a scan every five minutes and a data cache out of step with the market meant entries landed 7.1 minutes after the price bar that triggered them, on average.
- 03** A free market-data plan of 800 requests a day had to serve the charts, the strategy scans and the research.
- 04** Most trading ideas look convincing on a chart and fall apart when tested on data that wasn't used to choose them.

Built end to end

01 Six strategy books, three markets

02 Live price stream and shared bar store

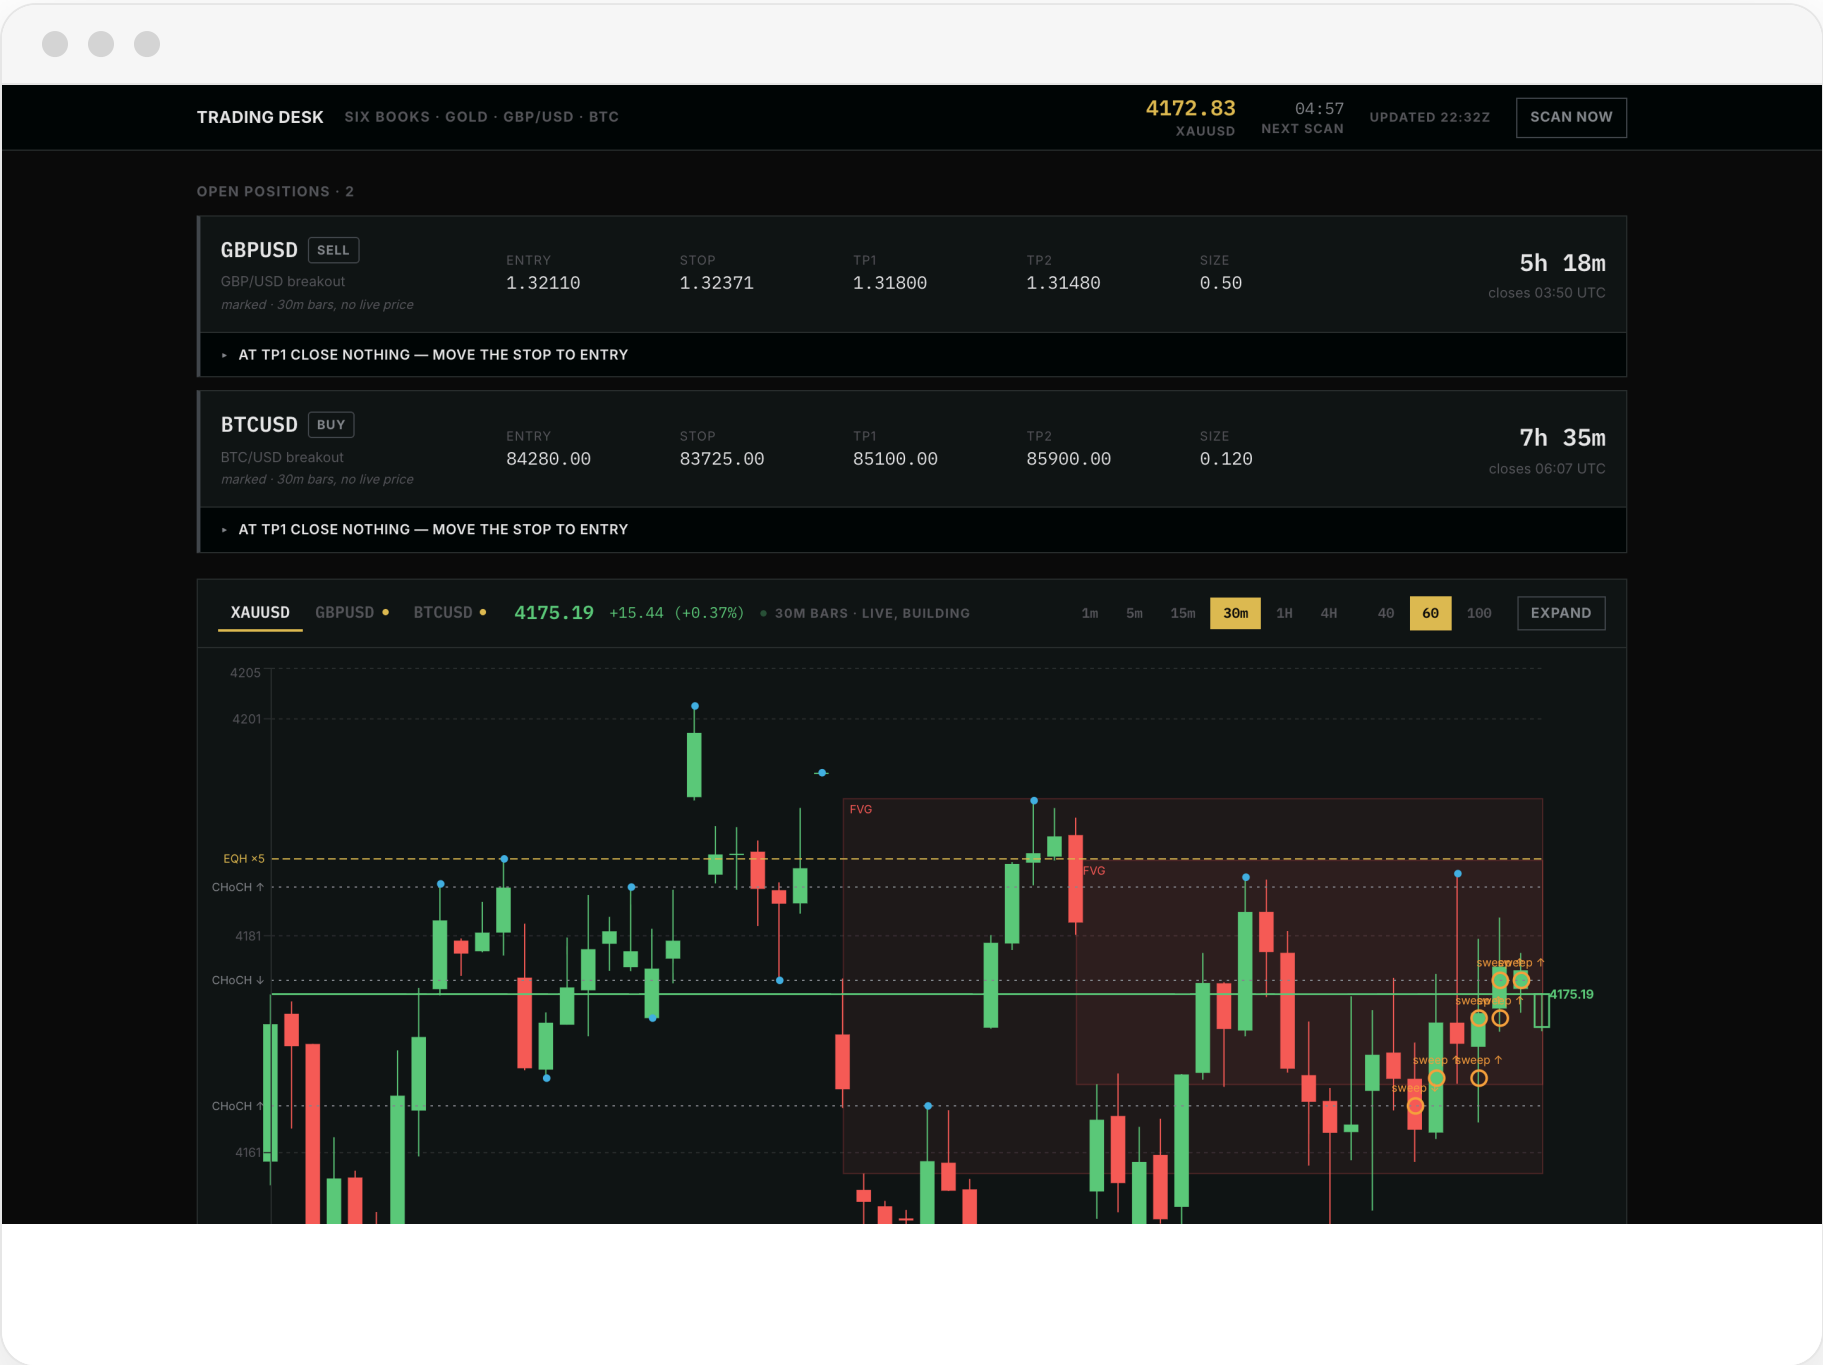

03 Two-stage Telegram alerts

04 AI second opinion, checked in code

05 Position tracking at stream speed

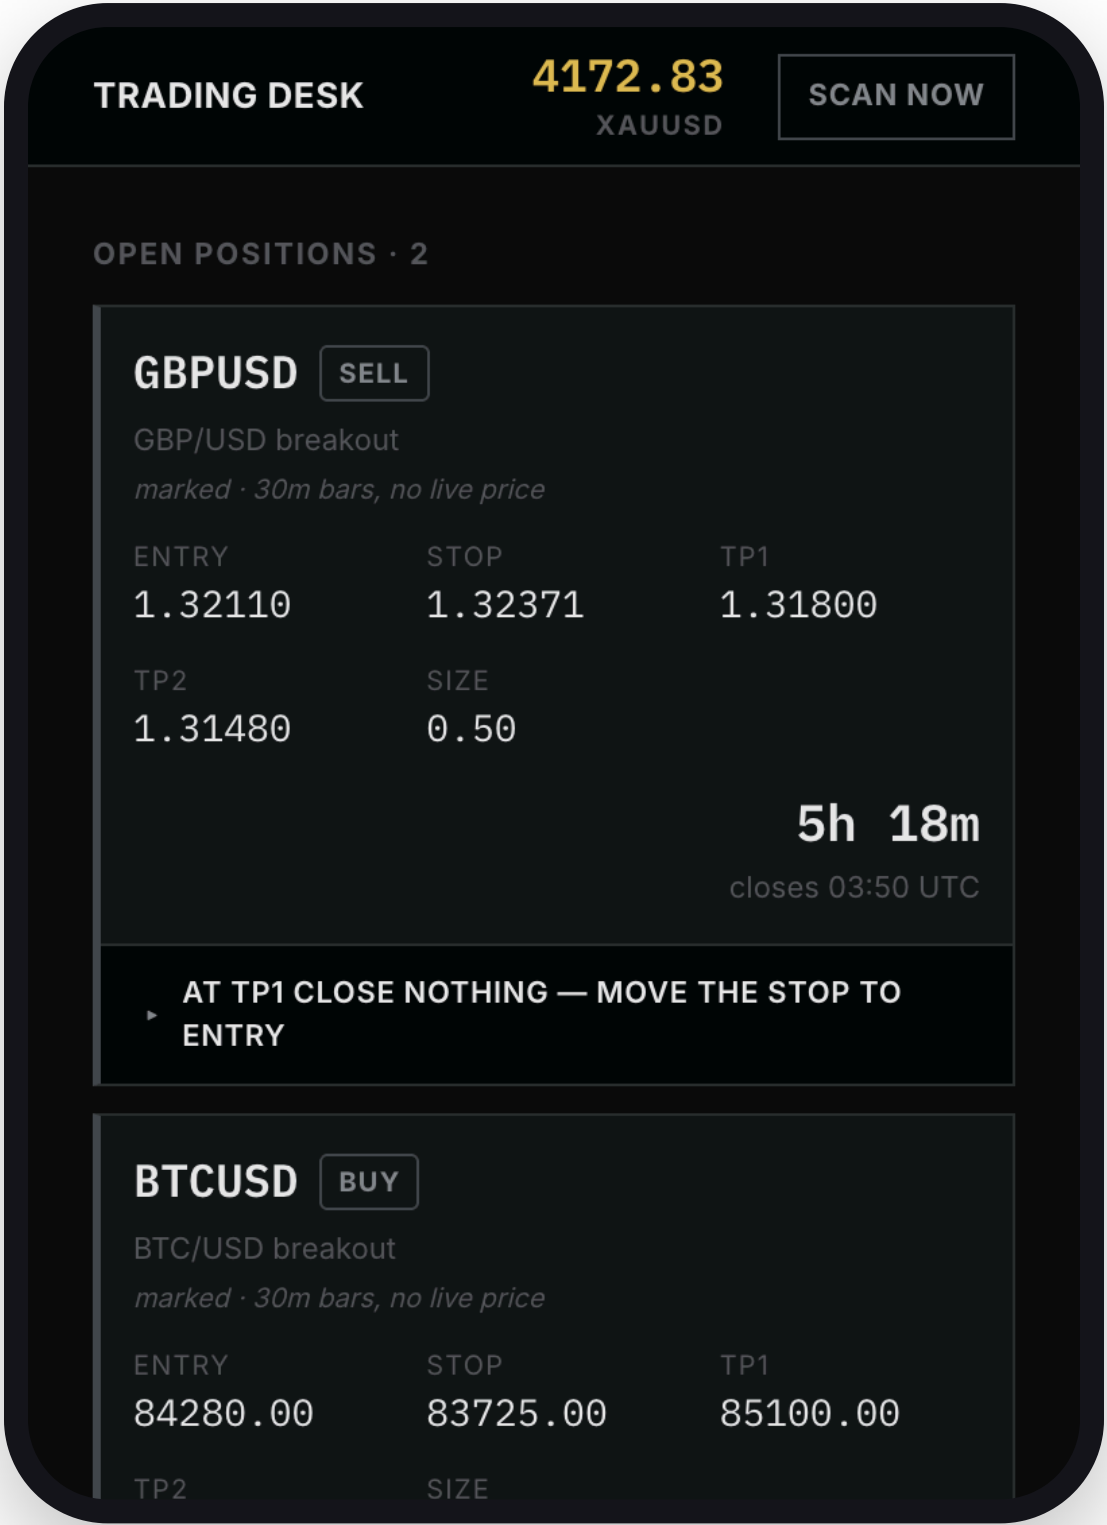

06 Trading console

— INSIDE THE PRODUCT

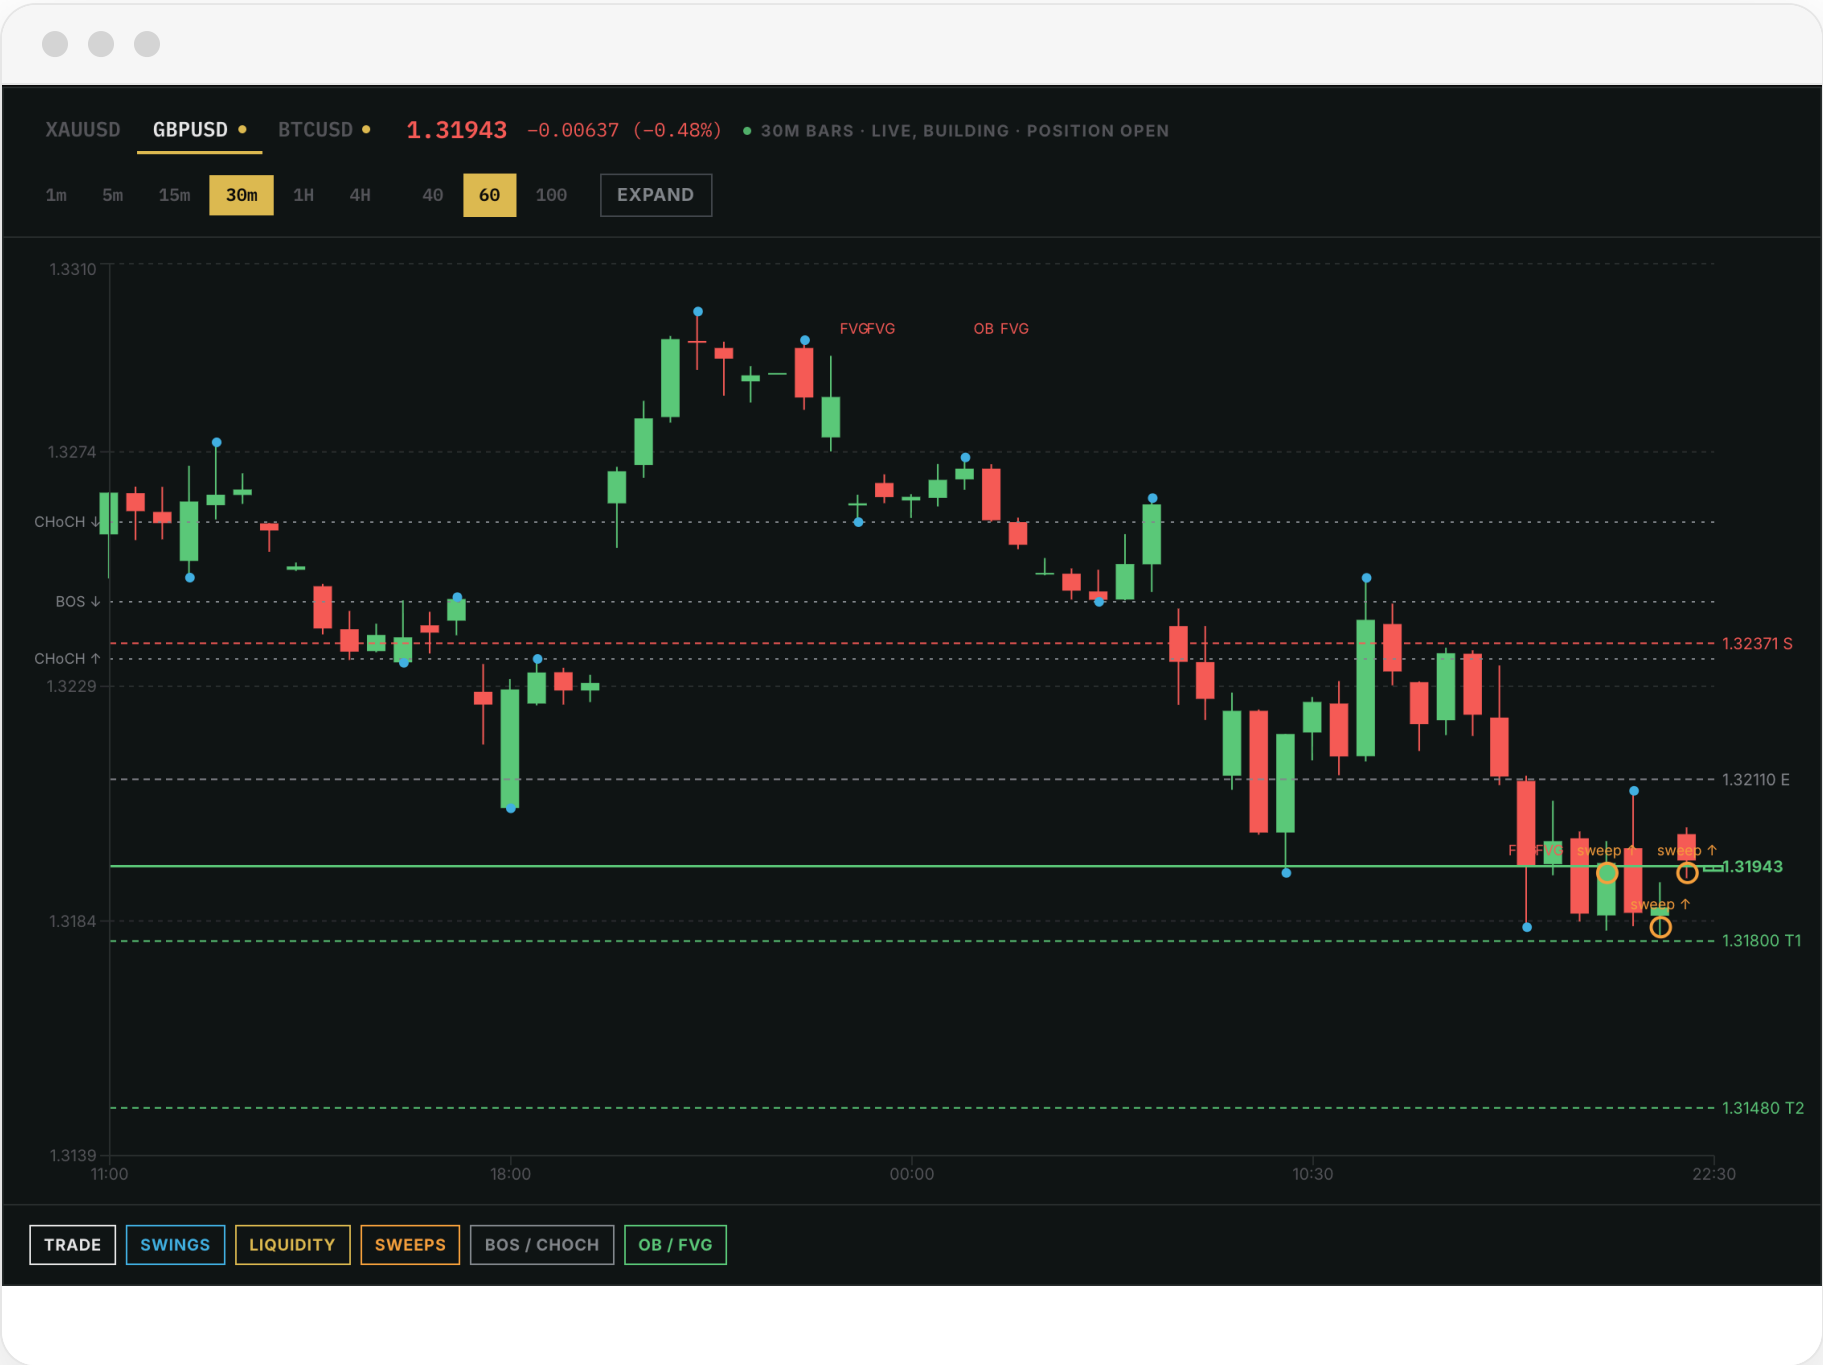

Console: open positions with their next action, above the live chart (sample data)

MORE OF THE PRODUCT

The same console on a phone (sample data)

MORE OF THE PRODUCT

A position's entry, stop and targets drawn on the live GBP/USD chart (sample data)

Built to be trusted

- 01** API keys stay on the server and are never logged.
- 02** Endpoints accept only the traded markets and validate every price and timestamp.
- 03** AI never places or sizes a trade: its verdicts are advisory and checked in code.
- 04** Calendar pages come from a fixed list of official sites and are treated as data, never instructions.
- 05** Six checks run every morning to prove the live code still matches the tested rules.

The outcome

6

strategy books across three markets, each tested on three years of history

2.5s

between position checks, driven by a live price stream

6

daily automated checks that the live strategy code still matches the tested rules

8

background services, running 24 hours a day, five days a week on a dedicated Mac

Next.js 16

React 19

TypeScript

Prisma 7

Neon Postgres

Zod

Recharts

Tailwind CSS 4

Gemini API

Ollama

FinBERT

Finnhub WebSocket

Telegram Bot API

macOS launchd
